Shanling MW200 Firmware V1.3.1 notes

New features:

1. Added Volume memory setting. Can be enabled in Shanling Controller app.

   App needs to be updated to the latest version – V1.2 on Android / V1.0.4 on iOS

Changes and Fixes

1. Improved connection process, re-connecting to paired device will be faster.

How to update:

Wireless Over-the-air update:

1. Connect MW200 to Android or iOS device and open the Shanling Controller app. Make sure that your app is updated to the latest version and that MW200 is connected with the app.

2. In the app, open side menu (…) and go to "Bluetooth device control".

3. Tap on the arrow at the Shanling MW200 listing. Start the update and wait until the app downloads and installs new firmware onto your MW200.

Manual update through Windows computer:

Please download update files from our website and follow included guide.
